## **FOR IMMEDIATE RELEASE**

### **Responsive Respiratory Upgrades Pediatric Regulator to Include Flow Conversion Table**

St. Louis, Missouri – June 1, 2016 – Responsive Respiratory expands its pediatric regulator offering to feature an all-in-one solution with permanently engraved flow conversion table (decimal/fraction) for quick reference.

RRI's pediatric regulator with engraved flow conversion chart is available in both CGA 870 and CGA 540 connections and a barb or DISS outlet. The regulator with conversion table benefits providers by streamlining inventory, eliminating the need to carry duplicate product to cover decimal and fraction flow settings.

“Our pediatric regulator with engraved flow conversion meets the needs of both providers and patients,” explains Tom Bannon, Responsive Respiratory President. “The inclusion of a permanent reference on the regulator body simplifies pediatric oxygen set-up and usage. The reference table eliminates the confusing conversion of prescribed flow settings between decimal and fractions, a primary concern for both providers and parents.”

The pediatric regulator with engraved flow conversion joins RRI's offering of EMS, Hospital, and Home Care regulators and their full line of ambulatory oxygen equipment and accessories.

About Responsive Respiratory - - Responsive Respiratory was founded in 2002 and is dedicated to providing high quality respiratory products for the home health care and hospital markets. RRI's full line of professional respiratory products includes: oxygen conservers, regulators, cylinder carts & racks and carry cases.
